Wilson Davidson Seriously Injured in Binder Accident

A serious accident occurred at the farm of A. Hoffman, east of Crossfield, on Thursday of last week, when Wilson Davidson (Barnacle Bill) 23-year-old farm hand, suffered a compound fracture of the skull in a binder accident.

Davidson was in the act of hitching a team to the binder to move it to the repair shop, a distance of about 50 yards. He had not put the bridles on the horses, and had one tug hitched when they took fright and bolted, knocking him down and pulling it over him. A section of the binder split the youths forehead, pierced the skull, and injured the brain, besides other body bruises.

Dr. Whillans was called and after dressing the wounds rushed him to the General Hospital Calgary, where despite the seriousness of his injuries he is resting comfortably.

Sawmill Worker Loses Arm

As the result of an accident at Fread's sawmill, Fern Creek, west of Wetaskiwin, on Thursday of last week, Leon Ryan, an employee, had his left arm amputated above the elbow at the Community hospital Wetaskiwin on Aug. 9. It is reported that he slipped and fell and his arm came in contact with the saw.

Mr. Ryan is a brother of Mrs. Ed. Clarke of Crossfield, who left immediately for Wetaskiwin on hearing of the accident.

Margaret Fitzpatrick Sails for Home

Miss Margaret Fitzpatrick, along with the contingent of Canadian athletes who have been taking part in the British Empire Games at London, England, are sailing today (August 16th) for home.

In a recent letter to her parents Margaret sends best regards to her many friends here, and states that she is having a wonderful trip.

To Consider Purchase of Rural Telephone Lines

A meeting will be held after threshing, to consider the purchasing of the rural telephone lines in the Crossfield district by farmers. The place of meeting and date will be announced in these columns in due course.

Cow Steps in Front of Motor Car With Usual Results

Harve McCool lost a dairy cow on Tuesday night when it wandered on to the roadway and was run into by a passing motor car, breaking its leg. It was not a complete loss however, as Harve sold the animal to one of our local butchers for six whole dollars.

Slot Machines

Slot machines at best are nothing more or less than a skin game; they are made for one purpose and that is to get the money. There is no skill required to play any of them. It's a man's privilege to play these machines if he cares to, but when young children are allowed to play these machines it is time to call a halt, and if necessary follow the example of Carrie Nation.

Strip farming is gaining in favor in this district, we notice O. E. Jones, Geo. Jones and R. M. McCool have adopted this method of farming, while others are talking of trying it out next year.

Several loans in connection with the Dominion Agricultural Credits Association, (advertised in these columns) have been put through recently to the satisfaction of purchasers of live stock in the district.

If some of our so called Christians would quit worshipping the Almighty Dollar, the depression would be made a whole lot easier for the poor and needy.

Old Timers Picnic Off

The proposed picnic of the Old Timers Association is definitely off for this year at any rate. It had been previously decided that the picnic would be held in conjunction with the School Fair on Sept. 6th. A meeting to consider plans etc. was held last Saturday, but owing to lack of interest, meagre attendance, also the fact that at that date threshing might be in full swing in the district, the meeting decided to call it off, and off it was called.

Extraordinary

An article in the Daily Press last week caught our eye:—A farmer from Castor sold a two-year-old steer at Calgary for 35c, we presume this is what it netted him after all expenses were paid i. e. freight, handling charges and commissions. Wonderful prices one gets when selling cattle, but its sure a different story when people go to buy it over the counter. Yes, then the boot is on the other foot.

School Track Meet To Be Held Here in October

The Rosebud School Track Meet will be held in Crossfield early in October. The towns participating will be Innisfail, Bowden, Olds, Didsbury, Carstairs, and Crossfield.

This meet is an annual event and brings together the outstanding school athletes of the above towns. Bowden won the cup last year, securing the greatest number of points at the meet.

Fields Plowed Up, Crops Levelled as Hail Strikes High River

High River, Aug. 15—One of the worst hail storms in many years struck at a point four miles south of High River at four o'clock on Tuesday afternoon cutting a swath nine miles wide and approximately twenty miles long.

Losses range from 25 to 100 per cent. Farmers report that even the pastures were plowed up by the force of the storm.

Hailstones piled up 15 inches in depth around farm buildings and covered the ground four hours after the storm. Practically no hail insurance was carried through the entire area.

POLICE COURT

L. Josephs appeared before the local Magistrate Monday morning, to answer a charge of stealing a latrine from a farmer in the Airdrie district, he was given 15 days hard labor in Lethbridge gaol, after pleading guilty.

Community Hall Nears Completion

The new community hall now under construction 9 miles east of Carstairs is nearing completion. The committee and residents of this community are to be commended for the fine co-operative spirit shown in building of this hall.

Harvesting in Full Swing

Harvesting is now in full swing in this district, and while the wheat crop is expected to average better than last year with yields of from 10 to 40 bushels per acre, oats and barley are very light. Green feed is also short.

We had a nice shower on Monday that should help gardens and late grains.

Harold Walsh Wins Two Events at Lousana Stampede

Harold Walsh, of Madden, was the winner of both the bucking horse riding and the calf roping contest at the Lousana stampede last week.

The Checkerboard And Peace

"Britain's frontier is now the Rhine." This statement, made in the British House of Commons by Stanley Baldwin while acting premier during the absence, in Canada, of Ramsay MacDonald, and used to epitomize his plea for extension of Britain's aerial fleets, thrust into vivid prominence the altered status of the mother country in regard to her European position. Development of aircraft by continental powers has banished that security from hostile attack guaranteed heretofore by a powerful navy and the "chalk cliffs of Dover". Automatically, her frontier has been pushed outward step by step with the growth of foreign air armadas and the increasing range of potential enemy aeroplanes.

Synchronizing, as it did, with the disturbing sequence of events which preceded and followed the assassination of Chancellor Dollfus of Austria, the debate in the British House startlingly revealed the extent to which the atmosphere surrounding the European scene had been impregnated with fear of war. No wonder Britain's statesmen are perturbed; no wonder the chancelleries have been striving to secure some effective guarantees of territorial integrity among the storm-racked powers of Europe!

The fear of war can be traced directly to the militarization of Germany under Adolf Hitler, and the obvious ambition of the Nazis to extend the sphere of German influence until the Reich becomes dominant in European affairs. Prior to the Austrian embargo, a concerted movement had been launched in Europe whose objective was (and is) effectively to curb Nazi ambitions of territorial expansion, west, east and south. The western frontier, marching with France and Belgium, had, of course, been "guaranteed" by the agreements contained in the Locarno treaty of 1925. Germany, France, Belgium, Great Britain and Italy had agreed, individually and collectively, to guarantee the inviolability of the Franco-German and Belgio-German boundaries as defined by the Treaty of Versailles. There had also to be a complete demilitarization of German territory west of a line drawn east of the Rhine.

Agreements with respect to eastern boundaries, however, were not sanctified by as far-reaching commitments and mutual guarantees. It is true, there was a network of arbitration treaties involving Poland, Czechoslovakia, Germany and also France, but the Reich would not go so far as to accept as inviolate and permanent her eastern border. In fact, the hope has been cherished assiduously in Berlin that sooner or later there would come a revision of the German-Polish boundary which would restore Danzig and the Polish Corridor to the Reich. It is this rift in the tute of peace, diplomats of Europe are now seeking to close by means of what has become known as an "Eastern Locarno".

The "Eastern Locarno" pact now proposed calls for a mutual assistance agreement involving Russia, the Baltic States, Poland, Czechoslovakia and Germany, and would provide mutual guarantees of their respective frontiers and for mutual aid against an aggressor seeking to upset the status quo. As Germany is the only nation fundamentally opposed to the present territorial set-up, the real meaning of the "Eastern Locarno" is apparent. The actual significance of the proposed treaty is that Nazi Germany's ambitions would indeed be curbed. If Berlin signs (and it has been put squarely up to Hitler), it would mean voluntary acceptance of her present boundaries, all around. It would mean definite renunciation of the Polish corridor and German claims to Upper Silesia. It would mean the stabilization of Europe in its present form. That apparently, is the key move to peace on the European checkerboard.

Apparently, too, "Locarno" is the formula of peace upon which European chancelleries pin their greatest faith. In addition to the "Eastern Locarno", a similar treaty, known as the "Southern Locarno", designed to preserve the Mediterranean status quo and involving, probably, Turkey, Italy, Greece and Yugoslavia, also is mooted.

Curbing Crime

Feminine Crusade Against Crime Started In United States

A feminine crusade against crime—designed to eliminate depredations of the Dillinger type—drew commendation from the United States department of justice.

The crusade has been given tremendous impetus recently by powerful women's organization.

"Women can play a most important part in the curbing of crime," said William Stanley, acting attorney-general.

"They can compare the form of government of their locality with the form in localities where not so many crimes are committed. We plan to set up a central bureau to furnish such information.

"If they find an unusual amount of crime, it is certainly indication that there can be improvement. They can demand improvement."

Correct Definition

A Sunday school teacher of modernistic tendencies was telling his class that the miracles recorded in the Bible were not to be taken too literally. "My impression is . . ." said he. Then, by way of testing their knowledge of words, he asked, "Can any of you tell me what an impression is?" "Please, sir," said a shrill voice from the corner, "an impression is a dent in a soft spot."

Few People Escape Attacks Of Summer Complaint

Summer Complaint may be slight, or it may be serious, but you can't tell when it seizes you how it may end. Allow the profuse diarrhoea, the vomiting and purging to continue, for a day or two, and you may become weak and prostrated.

Just as soon as you feel any looseness of the bowels go at once to your drugstore and get a bottle of Dr. Fowler's Extract of Wild Strawberry and check this unnatural action before the weakening looseness can get started.

Don't experiment. Get "Dr. Fowler's". It has been on the market for 85 years.

Hotels In Sahara Desert

Had To Be Taken By Camels In Small Parcels

As the French penetrate further and further southward into the Sahara, pacifying the roving Arab tribes as they go, hotels are being erected for the accommodation of government officials, visiting army officers, business men and the occasional venturesome tourist.

The hotels had to be taken south, through the desert, in parcels.

Each parcel weighed about 200 lbs., and was one camel-load. Caravan after caravan, travelling 45 days through the sands, brought to Timimoun, in the far south of Algeria, the many tons of windows, doors, glass, china, linen, cutlery, furniture, electrical installation and other equipment needed for the local hotel.

Neither foremen nor European laborers would agree to go there, so the place was built by French army engineers, who themselves had to trace in the sand the first outline of the building because the superstitious wild Arabs of the region feared the Evil Eye, and would not have anything to do with blue-prints. They did consent to make mud bricks, however, which form the walls, and to drag up to the site the date-palm trunks forming the roof beams and "girder-work."

The rest had to come in parcels. Even the ships of the desert bringing the parcels were temperamental. They would not travel on even good hard roads as were to be found along their line of route, but had to be steered over soft sandy coxae. Camels suffer from bad spells of foot soreness unless allowed soft tracks.

Drouth In South Dakota

Guards Patrol Water Holes In Western Part Of State

Instead of fat cattle and bumper crops the water famine has brought gaunt beasts and meagre yields approaching a crop famine in South Dakota, the estimates of agricultural experts showed.

Already the federal government has sent \$36,600,000 into South Dakota for relief since September, 1932. This sum is exclusive of corn, hog and wheat benefits and cattle purchases. Yet debts exist, mortgages are held on cattle and land.

C. J. Borum, agricultural statistician of the state college of agriculture at Brookings, estimated winter wheat would run about 4.5 bushels to the acre. Forty-two thousand acres remain out of 296,000 acres which were planted.

Guards patrol water holes in the western part of the state. Drinking water is carted miles to be sold in some sections.

Japan Develops New Art

Sculptography, by means of which persons or objects may be photographed in solid form, has been developed in Japan. Sculptography's greatest contribution to science, according to its sponsors, is in replacing the human element in the making of sculptures where exact likeness is more important than the artistic element. Just as photography replaced painting for such purposes, so sculptography has replaced ordinary sculpturing.

Automobiles De Luxe

Spring beds, shower baths, and radio sets are fitted to a fleet of automobiles in which an expedition intends to cross Asia from Syria, through Persia, and Pamer to China, and returning through India.

Model Hospital System

Irish Free State Using Sweepstakes To Further Project

With \$15,000,000 spent and an equal amount awaiting distribution, the Irish Free State hospitals envision an early day when they will be the envy of the world's surgeons and medical research workers.

Ambitious plans for the permanent endowment of the hospitals of the country are being laid by the hospitals commission. The help of the League of Nations' health section has been invited so the commission can have the best advice at the laying of the foundations of the project. Twelve sweepstakes have already been held.

The hospitals commission, a body headed by Michael Doran, former chief European engineer for Henry Ford, controls the vast sums which have been painlessly raised in every corner of the globe and prevents haphazard extensions by existing hospitals so as to prevent waste and overlapping. While allowing sufficient cash to trickle out of the fund for current needs the commission is proceeding with its task of evolving a model hospital system for the Free State in which every institution will be co-ordinated with its neighbor.

Soviet Buying Arms

Newspaper Claims Shipments From England Going To Russia

A London newspaper says that it is able to reveal that the recent exportation of arms from Great Britain, amounting to £2,482,246, was due mainly to orders from Soviet Russia.

The arms consisted largely of machine guns and munitions. More than three-quarters of the total found their way to Russia.

The permission of Whitehall had to be secured for these large shipments.

That Russia is feverishly buying up the products of the world's armament factories in readiness for the struggle she believes is approaching with Japan.

The armaments business is phenomenally busy.

Although the figures stand so high, they would have been much larger owing to insistent demands from Paraguay and Bolivia, but in these instances applications for licenses by the munitions manufacturers have been turned down by the foreign office.

Flags Raised Huge Sum

For World War Fund

Kitchener Flag Collected \$150,000

Flags which raised hundreds of thousands of dollars for helpless soldiers and refugees during the World War have just been presented to the Australian government by Edward Solomon of Melbourne. They are to be hung near the National War Memorial at Canberra when it is completed. The most treasured relic in the collection is the Kitchener flag which alone raised \$150,000. It is an Australian flag, which was sent nearly 200,000 miles and twice around the world to collect signatures. It was signed in the trenches by Joffre and Haig. A star from it was sent to Admiral Jellicoe, which he signed and returned for sewing into the flag. The autographs of the King and Queen were later added. Finally the flag was sent back to Australia where it was raffled in 1918.

The mourning cloak butterfly chirps.

CANADIAN HIGH COMMISSIONER HERE FOR HOLIDAY

This photograph, taken on board the Canadian Pacific liner, Empress of Britain, shows Hon. G. Howard Ferguson (left), Canadian High Commissioner in London, arriving home again for his annual holiday from his arduous duties of office. With Mr. and Mrs. Ferguson is Sir James Waterlow, Bart., son of a former Lord Mayor of London, who is here for a visit.

Canada's Industrial Prairies

Report Shows Western Provinces Are Becoming Industrialized

Canada's prairie provinces—Manitoba, Saskatchewan, and Alberta—are rapidly becoming industrialized. While these provinces, often referred to as "The Bread Basket of the World", are famous for their output of agricultural products, at the same time manufacturing plays an important part.

According to a report issued by the Dominion Bureau of Statistics, in 1932 the three prairie provinces manufactured goods with a selling value at the factory of \$187,451,377.

Establishments engaged in manufacturing numbered 2,687 and represented a capital investment of \$354,450,263. These plants provided employment to 38,964 workers who received salaries and wages totalling \$42,435,765. The value of materials purchased totalled \$92,247,846 and the value added by manufacture amounted to \$95,203,331.

Flour and feed mills led all industries with an output valued at \$24,246,761. Slaughtering and meat packing followed with products worth \$23,704,599. Other leading industries were butter and cheese to the value of \$15,754,828; central electric stations \$15,693,275; railway rolling stock, \$12,014,638; petroleum products, \$11,058,020; printing and publishing \$8,787,444; breweries, \$6,359,259; printing and bookbinding, \$4,417,145.

Not A Jew

Sir John Simon, British Foreign Minister, Denies He Is Of Jewish Origin

Sir John Simon, British foreign minister, denied he is a Jew. Sir John wrote the denial to a correspondent who had drawn his attention to statements current in Britain and abroad that the foreign minister was of Jewish origin.

At the same time Sir John expressed hope his denial would not be distorted to make him appear sympathetic with anti-Semitism, an attitude he regards as "un-English" and which he "utterly condemns". The minister's correspondent had mentioned reports that Sir John's ancestry had powerfully influenced the national government since he became foreign minister.

Radium in raindrops has been detected by G. R. Wait and A. G. M. Nish, of the Carnegie Institution's Department of Terrestrial Magnetism.

Daughter—Going to bed, mother dear? Aren't you going to sit up and wait for Dad?

Mother—What's the use? I have such a cold I can hardly speak.

Agricultural Notes

Interesting Items Gleaned From Many Sources

There were 36,863 less hogs graded in Canada for the first six months in 1934 than in the corresponding period of 1933.

When salting cucumbers, a layer of dill and a handful of mixed spice may be placed on the bottom and top of the crock.

The cheaper cuts of beef should be used in making soup, both because of their low cost and because they come from those parts of the animal which are richest in extractives.

Bacon exports to the United Kingdom continue to make headway, and the movement to date this year is very far ahead of that for the corresponding period of last year.

July 14, 1934, 15 geldings, 23 mares, 18 steers, 11 heifers, 6 cows, 6 bulls, 3 stallions, and 1 herder horse, all strays, were in the various official pounds of Alberta.

The British Crown colony of Trinidad and Tobago, with which Canada does an increasing trade, is the largest in area of any of the island colonies in the eastern group of the British West Indies.

A roast will brown more readily if sufficient flour is rubbed into the surface to make it dry. This also assists in preventing the escape of the juices. (Best Bulletin of the Dominion Department of Agriculture.)

The demand for honey in all the principal countries of the world arises from three main sources: (1) from domestic consumers; (2) from various manufacturing trades, confectioners, bakers, chemists, etc., and from the catering trade.

According to the regulations governing fruit trading in Canada, the phrase "properly packed" means that apples, pears, plums, etc., are not slack in the receptacle, or over-packed, or in a condition which is likely to result in permanent damage during handling or transit.

No fruit of any kind intended for sale shall be packed in any package other than the packages prescribed under the regulations of the Fruit and Honey Act, 1934, for each individual kind of fruit, except that where packages are not identified as for an individual kind of fruit, they may be used for any fruit.

For the month of June exports of cattle to the United Kingdom were approximately 1500 head more than for June, 1933, the movement being affected by market conditions, but for the first seven months of this year the number of cattle exported to Great Britain exceeded last year's corresponding period by 1,343 head.

When honey from more than one person is included in one shipment under one inspection certificate, the person assuming responsibility for the shipment must place a designating mark, registered with the Dominion Minister of Agriculture, on all lots of honey included in the shipment, for the purpose of identifying the packer.

Attention has again been drawn by the Livestock and Meat Trade Review, published by the Dominion Department of Agriculture, to the evil of overloading the Monday livestock market. Such action is a direct snub to the law of supply and demand, and not among its least evils is that it largely affects cattle of a value least able to support marketing costs, adding further costs to the carryover.

Cover Shelves with HANDI-ROLL

25 feet of white or coloured paper for kitchen use—covering shelves, lining drawers, etc.

Appelton PAPER PRODUCTS HAMILTON, ONTARIO

To Make Cosmic Survey

Research Institute's Instrument To Be Tested By U.S. Flyers

Apparatus that will record hitherto unknown data on the eternal fight between cosmic rays and atoms, 14 miles up in the air, has been completed by the Bartol Research Foundation of the Franklin Institute, and will be installed shortly in a stratosphere balloon to make a "cosmic survey."

According to Dr. G. L. Locher of the Bartol Foundation, when cosmic rays explode even a single atomic nucleus, the one explosion may produce millions of ions. Ionization—the scientific term for ionizing particles of gas in the atmosphere with an electrical charge—is 200 times as intense, Dr. Locher pointed out, at an altitude of ten miles above sea-level.

The automatic recording apparatus will be used at an altitude of approximately 70,000 feet. Dr. W. F. G. Swann, director of the Bartol Foundation, has announced that the initial stratospheric test will take place on June 15, when 150 of the small Geiger-Müller "counters" and other instruments will be handed over to Captain Stevens and Major Kepner, army fliers, who will take the recording apparatus aloft to make the survey.

The American Geographic Society has agreed to sponsor the experiment. Included in the new apparatus is an instrument which flashes a light when particles within it become ionized. In an informal experiment, Dr. Locher placed radium emanation near the instrument, resulting in immediate succession of flashes.

The studies being made above the stratospheric balloon, high above the earth's surface, may add greatly to man's knowledge of what cosmic rays really are, Dr. Locher believes.

Bees Sold By Pound

Two-Pound Package Builds Up New Colony Rapidly

There are approximately 5,000 bees in a pound and they may be obtained in packages holding one or more pounds, but the two-pound size appears to be the most popular for all purposes. There are, however, many beekeepers, especially in Eastern Canada, who prefer a three-pound package, thinking that the extra pound of bees will enable the new colony to build up more rapidly. But says Mr. C. B. Gooderham, the Dominion Apiarist, experiments with the two sizes of packages do not seem to warrant this assumption, for a two-pound package will usually build up as rapidly and store just as much honey as do the three-pound packages. If the bees are young and the loss during transportation not excessive, there are enough of them in a two-pound package to care for all the brood that can be produced by the queen, and the colony will build up just as well without the excess workers.

Two Ways To Be Happy

Diminish Your Wants Or Add To Your Means

There are two ways of being happy. One may either diminish our wants or augment our means—either will do, the result is the same; and it is for each man to decide for himself, and do that which happens to be the easiest. If you are idle, or sick, or poor, however, and it may be for you to diminish your wants, it will be harder to augment your means. If you are active, and prosperous, or young, and in good health, it may be easier for you to augment your means than to diminish your wants. But if you are wise you will do both at once, young or old, rich or poor, sick or well; and if you are very wise you will do both in such a way as to augment the general happiness of society.—Franklin.

Find Bamboo At Coast

A bamboo drift has been found on the beaches of Queen Charlotte Islands on the British Columbia coast, something not noted for years. It presumably came from the Orient. In years past bamboo and even palm logs have been found on the Queen Charlotte beaches. The bamboo drift usually coincides with an unusually mild year.

The street car conductor had asked Willie's mother how old he was to be sure he was entitled to a ride free. "Three and a half," said the mother. "And mama's thirty-one," added Willie politely.

The honesty of the British public is well known in the British Museum, which reports that it is a very rare occurrence to lose a book.

W. N. U. 2059

BLAME DEFORESTATION FOR DROUGHTS AND FLOODS

Climate transforming trees.

The terrible droughts that have tormented the mid-west of the United States, according to some scientists, are nefarious companions of the disastrous floods that transform the Mississippi river valley and its watershed into uncontrollable, raging torrents. Back of these twin tribulations of nature lies the century-long ruthless destruction of the enormous forest, the function of which, prominent meteorologists say, is to retain water and prevent wide changes in temperature. Levelling of forests has taken away nature's flood controls, while the treeless, drought-stricken plains finally are beginning to feel the temperature effects of the long campaign of deforestation.

New Honey Regulations

Eight Classes For Export And Four For Domestic Trade

Canadian honey is gaining a firm foothold in the markets of the world, and in order that there shall be no false step in the upward journey, the Canadian government has promulgated the Fruit and Honey Act, 1934. In future, all honey for export to destinations outside Canada will be divided into eight classes, according to color, namely, water white, extra white, white, golden, light amber, dark amber, dark and unclassified. For honey shipped from the province in which it is produced to any other province, the classes according to color will be white, golden, amber, and dark. When honey in any of these classes is in granulated form, and any doubt as to color is expressed, a sample of the honey will be liquefied and classified on the liquid honey basis. The grades for all honey, whether for export abroad or inter-provincial shipment, will be three, No. 1, No. 2, and No. 3, and before shipment or before being submitted for inspection, each package must be plainly marked according to the regulations. The markings include the name of the province of origin, and the word "honey." In the case of honey for export outside Canada, the word "Canadian" or "Canada" must be used instead of, or in addition to, the name of the province of origin. Among the other required markings are the class (color); the grade, with a capital "B" in brackets immediately following the grade name where the aroma or flavor of buckwheat honey can be detected; the registration number—or registered trade name, and the weight.

Sheep Have No Hair

As Far As Known Only Animals Covered With Fleece

When wool and hair are examined and compared under the microscope wool is much simpler than hair. Wool grows from the upper layer of a double skin. Hair on the other hand is a filamentous structure which is a modified form of epidermis growing from a short papilla sunk at the bottom of a follicle or tiny pit in the outer skin. As a result of this difference between hair and wool sheep have no hair. Their bodies are covered with a fleece and as far as known they are the only animals so covered.

World's Largest Skeleton

The largest skeleton in the world has been placed on exhibition in the New Whale Museum in London. It is that of a blue whale, 82 feet long, which stranded itself on a sandbank off Ireland 40 years ago, and has since been in storage waiting a room large enough to house it.

The average apple crop estimates in the districts of Nova Scotia compared with 1933 is slightly more than half the production of last year.

Railway Camping In France

People Take To New Way Of Spending Holidays

Every British soldier who served in France during the war remembers being crowded into the dark, musty railway cars marked "Forty men or eight horses," which, used to take the troops to the front.

If you wish, you can travel to-day in these same cars—but with the utmost comfort—to any part of France you like.

For "railway camping," as it is called, is the latest way of spending your holidays in that country. You hire your car, and it is attached to the first outbound train.

The route to be followed is at the discretion of the travellers. They choose the station at which they wish their "private car" uncoupled. They are shunted on to a siding.

When they desire, their car is attached to the next passing train, and they move on to their next selected spot.

The hire of the car is approximately a dollar a day, plus half the ordinary first-class fare for the distance covered by railway.

In the yards outside the St. Lazare Station in Paris there stands the first section of these old cars. They have been cleaned and painted, and gone from their sides are the wartime inscriptions so familiar to the troops.

Gone from their interior is the odor of musty straw, and gone, too, are the dirty brown sides. Now they are spotlessly white. They smell only of fresh paint.

Grapefruit rind yields essential oils which are found to be valuable in perfume and flavor manufacture.

Steel office furniture first was manufactured in South Africa.

Craft Cannot Be Sunk

German Gunners Practise On Ship Loaded With Cork

When the heavy guns of Germany's small fleet hurl their steel at the target ship "Zaehringen," the gunners are firing on an entire Spanish cork crop.

Guided by short wave radio impulses the target ship is capable of executing uncanny manoeuvres while in control of the sending ship "Blitz." After the ships practicing target shooting have fired a salvo the "Blitz" crew directs the target ship to inspect the hits.

Because of the number of hits scored below the water line the "Zaehringen" is heavily laden with cork to prevent her sinking. The target ship is one of the old ships of the line which has been remodelled for its present work. Oil burners furnish the steam motive power.

Answer To The Riddle

"Surely it is a rational object for civilized society, daily and hourly trumpeting forth declarations of Christianity, to devise conditions in which its competent members, at least, are able to secure a decent competence and enough margin to enjoy the pleasures of life. In this objective—scientifically attainable in my opinion—obviously lies the answer to the riddle." Major Harold Brown, Vancouver, in Country Life in B.C.

During the first 10 months of 1933, British motorists covered 640,000,000 more miles than in the same period of 1932, according to the gasoline records.

Prefer Safety To Chance

Women Aviators Do Not Enjoy Counting Danger In Air

Air women will not, perhaps, perform acrobatic or sensational manoeuvres with as much dash, nor will they attempt such spectacular approaches and landings as men, says Mrs. I. M. Patterson, writing in the Times aviation supplement.

Very few women enjoy counting danger, although they will usually face it courageously when it comes, Mrs. Patterson says. Consequently they seek to eliminate all chances from their flying. If the result is less impressive for the spectator, it cannot follow that a woman's flying is necessarily less skilful, in the writer's opinion.

"Intellect, or even intelligence, has practically no bearing on flying ability," Mrs. Patterson goes on. "There is nothing to prove that these qualities are exclusively masculine, for they are almost identical with those which constitute good leadership, in which women have long been recognized as capable of equalling, if not of surpassing men."

"They are surely dependent on the character and temperament rather than on the sex of the individual, and the best illustration of this is the proportion of women pilots, of the small total who have done more than merely learn to fly, who have given proof of their capabilities."

Of the 2,000 old holders of amateur pilots' licenses in England about 60 are women, of whom scarcely a dozen are at all known, or "regarded by their fellow pilots as worthy of consideration."

"One is compelled to accept the fact that outside the small group of regulars already mentioned, the average woman's flying aspirations seem to be fully satisfied by the possession of even a obsolete license," says Mrs. Patterson.

"Club secretaries have the utmost difficulty in making them complete the beggary three hours' flying which is the only condition attached to a renewal, and it would seem that their ambition is not so much to fly as to have flown."

Unusual Uses For Vinegar

Housekeepers Might Find Following List Of Interest

A few unusual uses for vinegar might be of interest. We all know its culinary uses, but has any one tried the following? They have all been tested.

When an aluminum saucepan is scratched with a little vinegar and water in it to remove the stain.

Vinegar added to the water in which kitchen cloths are boiled "kills" the grease and whitens them.

A little vinegar added to the solution when dyeing makes the dye take better.

If glass is washed in vinegar and water a better polish is obtained.

Vinegar and water will freshen the color of carpets and tapestry and take the "shine" off serge suits and costumes.

Vinegar added to the water for washing furniture, paint and windows halves the work.

A few drops of vinegar on a lump or spoonful of sugar will ease a cough or sore throat.

A 50 per cent. solution of vinegar and warm water is a splendid gargle or wash for small wounds.

Most cases of dandruff, or a "bad scalp" will cause the hair to grow again. This applies to humans and animals.

Vinegar applied freely will prevent poisoning from dog or insect bites. Vinegar added to grate or shoe polish that has dried in the tin will give a splendid polish.

Invisible Ship

Idea Is Sent To United States Navy Department

Plans for an invisible ship which would be revealed to an enemy submarine merely as a huge wave sweeping across the sea were sent the United States navy recently. They call for a vessel covered with glass containers filled with sea water, but the navy is taking no steps to accumulate a glass supply. In fact, the plans are destined to collect dust in pigeon holes alongside countless ideas and suggestions which ambitious inventors submitted.

Neglecting His Job

First Business Woman—"Well, I must hurry home to dinner. I love a good homecooked meal, don't you?"

Second—"Yes, but I'm beginning suspect my husband's spending his afternoons in the matinees. I'm positive that pudding last night came from the delicatessen."

Tin cans are made of a thin sheet of steel coated with pure tin.

Sunshine Trail Most Beautiful Highway

Magnificent Scenery From Peace River To Los Angeles

The Sunshine Trail, extending 2,300 miles from the Peace River in northern Alberta to Los Angeles in southern California, is being used in its entirety by motorists for the first time this season.

It is now complete as an all-weather highway, gravelled or paved, for the entire distance from Los Angeles clear through to a point 50 miles north of Edmonton, with the remaining 300 miles in northern Alberta to the banks of the Peace River completed as a standard earth highway ready for its coat of gravel.

Nowhere in America is there a more beautiful and more abundant in beauty and interest. The history of the west may be read as one runs, in the relics of the ancient Spanish regime in southern California, in the inter-mountain refuge founded by the Mormons 10 years ago on the shores of the great Salt Lake in Utah, in the mining camps and the cattle ranges of Idaho and Montana, and southern Alberta, on to the far northern country where the fur traders and Indians met along the old Athabasca trail.

For beauty, the Sunshine trail links up, by means of short side trips, with Zion park and the Grand Canyon of the Colorado, the Yellowstone in Wyoming, Glacier in the Rockies of Montana, Waterton lakes just across the border in Alberta, Banff and Lake Louise, gems of the Canadian Rockies, just off the trail west of Calgary, and Jasper National Park, the largest mountain national park in the world, west of Edmonton.

The Best Disinfectant

House Should Have Plenty Of Sunlight Whenever Possible

A well lighted house is usually cooler inside than the air outside in summer. This is because the sun's heat is stopped to a certain extent by the walls. It is possible, by judicious ventilation, to preserve that coolness, an equally possible to bring in the heat.

Since the walls turn back the sun's rays, any break in the walls will permit the heat to enter. For that reason, it is well to close the windows excepting on the shady side of the house, draw the blinds, and keep the house fairly well close up during the hottest part of the day. As the temperature goes down to dawn, open the windows, and let the wind blow, to catch any passing breeze. Leave them open during the night, and close them up in the morning.

Sunlight is the greatest disinfectant, so there are limits to this program. On days when the thermometer is only comfortably high, let in all the sunlight possible to every room and cranny. Run the blinds up to the top of the windows, and let the air circulate through the rooms freely. Give the bread box, flour bin and other closed containers a sunning every week or two. Coax the sunshine into clothes closets, dresser drawers, attics and cellars, wherever there is a possibility of mould or decay being found.

Only when great heat comes there is need to shut out this mighty power for health. The summer is short and the winter is long. A light comes strength for winter. A dark house is not a healthful place, though it is delightful when the temperature soars beyond reason.

Not Written In Stars

No Need For Disaster Like Modern War To Occur

They are distilling death in the laboratories of all "civilized" countries, and our own country is not behindhand. To-day we are told that no expert can now produce a gas mask which is proof against certain kinds of attack. One group of chemists invents a new means of dealing death. An antidote is found; then out of the devil's broth of research comes a new compound which renders the defensive device futile. But such a disaster as modern war need not occur. It is not written in the stars. It can be prevented. If it is prevented if governments seek peace with one-half the persistence, the energy, the skill they now devote to preparing for war. If the governments will not move, the people they rely must compel them.—London Daily Herald.

Spores that attack potatoes, tomatoes, and fruit crops, travel through the air at a height of approximately 18,000 feet.

Indian farmers, like modern farmers, were plagued by cutworms in their fields.

WORLD HAPPENINGS
BRIEFLY TOLD

Fifty families at Deptford, England, were rendered homeless by the collapse of houses following subsidence of a road after heavy rains.

The Soviet Union's wheat harvest covered a total surface of 87,500,000 acres this year, which was 32,000,000 acres more than last year, it was reported by the Tass News Agency.

The British Exchequer will benefit by approximately \$5,800,000 in death duties from the estate of the late Viscount Tredegar, landowner, who left an estate valued at \$11,845,000.

Pit destroyed Hillsborough Castle, seat of the governor of Northern Ireland, the Duke of Abercorn. It was one of Ulster's most historic spots.

United States exports to Canada in June, according to department of commerce figures, showed a sizeable gain over June, 1933. Imports from Canada registered a moderate gain.

Receipt of a cheque for \$1,000.00 as a gift from the Rockefeller Foundation was announced by McGill University. It represents the endowment by the foundation of the department of neurology.

Dr. Albert W. Abbott, administrative head of the Canadian Red Cross and in wartime Ontario director of labor for the Imperial Munitions Board, died Aug. 7 at his home in Toronto.

France denied Japan her support in any steps toward abrogation of the Washington naval treaty of 1921 by announcing her intention to adhere to its provisions pending "some change in the European situation."

Goniometric radio stations for noting positions of aeroplanes and indicating their exact position if necessary will be set up around the coast of the United Kingdom, the air ministry announced.

Off the west coast of Belcher Island, tribute was paid to Henry Hudson and his son who three centuries ago were put ashore by mutinous crew and never seen again. On the boat deck of the ship the ceremony was carried out by P. S. Ashley-Cooper, governor of the Hudson's Bay Company.

Little Journeys in Science

SOLUTIONS

(By Gordon H. Guest, M.A.)

When a spoonful of salt is placed in a glass of water, we observe that the salt disappears. The scientist describes this simple fact by saying that the salt has dissolved in the water, and he calls the resulting mixture a salt solution. The substance which is dissolved is called the solute, and the material which does the dissolving is known as the solvent. Thus, when salt is dissolved in water, the salt is the solute and the water is the solvent.

Water is the most common and useful of all solvents. It dissolves many solids such as sugar, salt, washing soda, and saltpetre. It also dissolves some liquids such as alcohol, which mixes readily with water in any proportion. Some gases are very soluble in water, whereas others are only slightly soluble. Ammonia gas dissolves very readily in water, producing a solution which is sold as household ammonia. Oxygen is an example of a gas which is only slightly soluble, being found to the extent of three parts by volume to 100 parts of water. However, a small amount of dissolved oxygen is sufficient to keep fish alive. The fish extract the oxygen from the water by means of their gills.

We are quite familiar with many other solvents. Gasoline is a good solvent for grease. Turpentine dissolves paint and ether dissolves fats. Another good solvent for grease is a liquid known by the chemist as carbon tetrachloride. This is sold widely as a cleanser, under various trade names.

Plants can only use the minerals from the soil in solution. The water in the soil dissolves some of the minerals, and this solution is taken in through the roots of the plants, and up to the leaves by capillary action. In the human body all food is first transformed or "digested" into soluble substances before being taken into the blood stream.

"Hardness" in water is due to the presence of certain minerals which are dissolved in the water. The hard crust frequently found on the inside of tea kettles is made of these minerals, which are left behind when the water changes to steam.

From many of the feeding tests carried out at the Dominion Experimental Farms and elsewhere, it has been found that barley is an excellent substitute for corn in the feeding of livestock.

The columbine flower was named because of its fancied resemblance to a nest of doves, in Latin, *Columba*.

Has Unusual Record

Woman Machinist Took Turn On Watch In Graf Zeppelin

Karin Mannesmann, graduate engineer, holds the unique record of being the first woman machinist to be employed on a flight of the Graf Zeppelin.

Karin completed a round trip from Friedrichshafen to South America taking her shift in the motor gondola of the Zep with the other machinists.

The young lady wore greasy overalls the entire time aboard the ship in contrast to the chic frocks of some of the women passengers.

Miss Mannesmann has been employed in an aeroplane factory and made the trip to familiarize herself with heavy motor under flying conditions. It was a prerequisite for a better job with a rival manufacturer.

During the trip she stood watches of two hours on, two hours off in one of the motor gondolas, the trick and rest periods at night being tumbled.

Karin was graduated from the technical high school in Berlin receiving her degree in engineering. Since leaving school she has devoted her talent to aeroplane design and construction.

By Ruth Rogers

Jack Miner about to liberate a tagged Canada Goose to study its route of migration.

was then only 13 years of age, and he would have been a boy. So I ran home for help.

Sportsmen remember this, youth is the springtime of life, and age is the harvest, and at the price the average sportsman is paying for his sporting thrills to-day I have long since been a multi-millionaire.

Years and years before we had an open season on moose in Ontario, I hunted them in Quebec, and time and again I have enjoyed the tingling thrill of having a small car load of moose at the mercy of my rifle, and from 1903 to 1917 they were nearly as thick in Ontario. (Moose I believe are the largest antlered game on earth).

I have flashed a light into a bear's den and been thrilled by seeing three of these black clouds with pretty antlers looking helplessly and pitifully at me.

I have answered the howling of a wolf and as proof of it, shown him I soon saw him come quartering to the west, and without exceptions I am shooting career as I pressed the trigger.

Three wild cats and becoming ones for figures no longer slender, are the attributes of this lovely dress with cool clinging cape, trim neck, and a chignon collar print made the original. You'll find it very inexpressive. It is beautifully and packs so perfectly for those week-end vacations.

A coin spot cotton, say in soft handkerchief-finish lawn would also make up very effectively in this model.

Smart no lines and becoming ones for figures no longer slender, are the attributes of this lovely dress with cool clinging cape, trim neck, and a chignon collar print made the original. You'll find it very inexpressive. It is beautifully and packs so perfectly for those week-end vacations.

Price of pattern 20 cents in stamps or coin (coin preferred). Wrap coin carefully.

Two and one-half million feet of lumber will be shipped over the Hudson Bay Railway through Churchill to Great Britain this summer by one lumber company at The Psa. The present order is in the nature of an experiment but the company is hopeful of shipping an increasing volume from year to year.

Thrills Of An Under-Privileged Sportsman's Life

By JACK MINER

Yes, readers and they grow to be more thrilling as the years ripen the human mind to be more and more appreciative and considerate of the blessed body and soul building and powerful advantages God has given us in the study of His great outdoors. Personally, I am compelled to believe that my handicaps have brought me more than I could ever not buy nor take away. For illustration, as soon as I was big enough to toddle after father on a pigeon hunt and pull the top rail off a high fence down on me I can remember father shouting in his English accent, "Here come, Jack, hurry up and join." And soon I got the thrill of hearing and see the pigeons rain down all around and about me. Later on the thrill of moving to the much talked of Canada, and loading and catching my first den of sweet, pretty, little, hard-biting red foxes. Then when fall came on and we were all meat hungry, I slipped out, and one snowy Sunday morning had the thrill of my life, for in less than an hour I had killed my first deer. I

ten of them by name. But here they are all back in their November formation, and in my simple way I seem to want to know more about them. With my hands I try to focus my eyes on them and so forth. FARM CREDIT ACT IS TO BE APPLIED SOON

Ottawa.—Within 10 days, the government will proclaim the Farm Credit Act passed last session, enabling debilitated farmers to arrange compromises with the creditors and start over again financially. It was announced. It probably will apply first to Manitoba, Saskatchewan and Alberta, where the need is most, being extended later to all provinces.

M. A. MacPherson, former attorney-general for Saskatchewan, has been in Ottawa two or three weeks, drafting regulations under the act and starting it in motion. He will not be a permanent official.

In a statement, the former Saskatchewan official said the purpose of the act was to provide legal machinery of the simplest type, enabling financially-distressed farmers to secure relief from their over-powering debts. At the same time, it provided safeguards for the creditors.

In passing the legislation, said Mr. MacPherson, parliament "felt that if the debtor and creditor can be brought together easily and the actual facts and circumstances obtained by reasonable and frank consideration then, that there should and would be an understanding arrived at."

The legislation makes available to both sides the opportunity that there may be fair investigation of the true situation.

This should mean a fresh start for the debtor—a start which will mean that while he will still have obligations, these obligations will be so rearranged that he can face the future with confidence and be no longer in default. Each party must be prepared to deal reasonably with the other. A settlement is needed between debtor and creditor and it must be made without destroying the basis of credit and confidence, and, as well, without undermining the basis of co-operation.

If, under the act, the parties at their meeting cannot agree, then there is provision for appeal to a tribunal, which can formulate a binding proposal, basing it upon the "present and prospective capability of the debtor to perform the obligations prescribed and the productive value of the farm" (section 12).

No Change This Year

Government House in Ontario Not To Be Closed

Toronto.—Decision as to the maintenance of an official residence for the lieutenant-governor of Ontario will be reached when the legislature meets, Premier Mitchell Hepburn has stated. Asked if he was going to close up government house, Mr. Hepburn said the funds for this year had been voted and no change would be made.

"A resolution will be introduced in the house next session, either by the government or a member dealing with the matter," he said. "It will be left to a vote of the representatives of the people and I don't think there is much doubt of the result."

Mr. Hepburn said he had no desire to harass or annoy the lieutenant-governor but had to give effect to the will of the people and their expenses. The governor was appointed by the federal government and consequently the province had nothing to say as to his \$10,000 salary but a decision had to be reached as to whether the province should continue to maintain a residence. In his opinion it should not.

Strengthen Gold Reserve

Flow Of Hoarded Gold To London From India Now \$750,000,000

New York.—The flow of hoarded gold from India to London, which began with Britain's suspension of the gold standard not quite three years ago, has now exceeded the sum of \$750,000,000.

This movement of metal from the hide-aways of the east is a major factor in strengthening the financial basis for economic recovery, in the opinion of many commentators. Much of the gold has gone into the vaults of central banks where it provides the foundation for credit and currency.

Tree Museum

Seattle.—Work has been started on what officials say will be the "biggest tree museum in the United States." The Washington Emergency Relief administration made \$500,000 available for the giant Lake Washington arboretum.

W. N. U. 2059

Marketing Plan

Plan To Be Put In Operation, Beginning With Apples
Toronto.—The Globe in a special despatch from the Ottawa correspondent says the Dominion government's experiment in control and regulation of marketing of natural products will be inaugurated this week. The first products to be dealt with under the scheme will be apples and pears, the Globe says.

The first step in launching the scheme will be the designation of a minister to take charge and it is expected Hon. Robert Weir, minister of agriculture, will start the task at once. The cabinet will then pass approval on Mr. Weir's selections for the federal marketing board after which the act will be promulgated.

The Globe added: "Mr. Weir, it is understood, will take personal and active charge of the operations of the federal board, whose primary function will be to deal with the various schemes submitted by producers throughout the Dominion. The federal organization is expected to include in its various departments such officials as D. Horace Barton, deputy minister; Dr. J. F. Booth, formerly director of markets for Saskatchewan; and an authority in the department of the wheat situation; R. L. Wheeler, acting fruit commissioner in the absence of G. E. McIntosh, who is ill; J. F. Singleton, dairy commissioner, and G. B. Rothwell, livestock commissioner.

Churchill Busy Port

Takes On Business Aspect At The Opening Of Navigation

Churchill, Man.—Rising from the rock-enclosed Hudson Bay shore, the mammoth elevator and docks of Canada's most northern seaport have taken on a business like aspect as preparations went ahead for opening of navigation within the next few days.

Three steamers are inward bound, the S.S. Dalworth of the Dalgleish lines, the S.S. Brandon, and the S.S. Rio Clara. No longer a mere outpost of civilization, but a vital point in the commerce of a nation, Churchill girded itself for the busiest shipping season since the northern water route was opened in 1931.

Ten ships have been chartered to handle Churchill's share of that golden tide of grain which flows each fall from Canada's western prairies. The 2,500,000 bushel elevator is filled to capacity and in addition to grain cargoes, cattle, flour, oatmeal and other commodities will be shipped from the northern port this year.

The S.S. Brandon last year made two trips to Churchill and took the first cattle shipment of 20 head over the northern route. The Brandon will again depart with a livestock cargo and it is believed this boat and the S.S. Grethel will both make two trips into Hudson Bay this year.

Studying Cerep Loan Plan

Would Give U.S. Farmers Control Of 1935 Supplies

Washington.—A gigantic cerep loan plan which would leave control of 1935 supplies in the hands of farmers who grow them is hatching in the United States farm administration.

Modelled after this year's corn and cotton loans, the plan will call for government loans on a wide range of other crops. There will be a stipulation that supplies must be sold at prices not less than a certain point. Last year the government advanced farmers 10 cents a pound on stored cotton, and 45 cents a bushel on corn sealed in cribs or warehouses. This pegged prices at those levels and officials say the plan was a success.

As prices advanced beyond those levels recently, farmers began selling crops, paying off loans and making a profit for themselves.

Start Dionne Home

Callander, Ont.—Excavation work has started for the new home of the 71-day-old Dionne quintuplets. The modern brick building will be known as "the Dionne hospital for the Dionne quintuplets," in honor of the middle-aged north country practitioner who has amazed the world with the favorable progress his direction has brought the infants.

Gold In Manchukuo

Tokio.—Geologists and mining experts believe Manchukuo has rich deposits of gold, hidden in its extensive Khingan and other mountain ranges and river valleys, only awaiting exploitation by modern methods to yield returns that would make the new east Asian empire one of the wealthiest countries in the world.

Profit On Wheat

Presumably Belongs To The Three Western Pools

Ottawa.—Statisticians at work when wheat recently touched a dollar a bushel for the May delivery at Winnipeg, estimated a book profit of \$20,000,000 on the government incursion into wheat price stabilization.

The profit, it finally resulted according to John I. McFarland, manager of the selling agency, presumably belongs to the pools of Manitoba, Saskatchewan and Alberta and not to the Dominion, which guaranteed the manoeuvre to the banks.

The profit does not affect the return for farmers and is predicted upon this year's reduction in yield in Western Canada and the crop failure in western Manitoba and southern Saskatchewan.

PROJECT TO BUILD UP STRONG AIR FORCE IN BRITAIN

London.—Geometric radio stations for noting positions of aeroplanes and indicating their exact position if necessary will be set up around the coast of the United Kingdom, the air ministry has announced. The project is part of the new drive to build up the Royal Air Force to protect Britain in case of invasion.

Such stations are slated for the Isle of Wight, Ireland, Scotland and the north of England.

"A confidential mission of the highest importance connected with the defence of the Empire" is being undertaken by Sir Maurice Hankey, secretary of the imperial defence committee and of the cabinet, according to the Daily Herald.

It was announced Sir Maurice is leaving for Australia to attend the Victoria centenary celebrations and on the way will spend some time in Cape Town, South Africa, Lady Hankey's former home.

Describing the centenary celebration as the ostensible purpose of the visit, the Herald says the utmost secrecy is being observed with regard to the real object. It says that in addition to South Africa and Australia Sir Maurice will visit New Zealand and Canada to discuss with experts on the spot vital matters of military, naval and aerial strategy.

The paper further suggests these questions are connected with "defence problems arising out of the new turn of British policy resulting from the reciprocal visits of General Maxime Weygand (chief of the French general staff) and Lord Hailsham (British minister of war) also the naval requirements of the Empire in view of the outlook for the 1935 naval conference which the Herald describes as 'glooming but ever'."

Sir Maurice's intention to visit Canada and New Zealand is also mentioned by the Daily Mail and the Daily Express. The Mail says he will take advantage of his trip to make a tour visiting the various Empire governments on behalf of the cabinet and adds it is understood important questions of imperial policy, particularly with regard to defence, will likely be discussed.

It was stated some time ago that Sir Maurice would advise Australia on defence matters during his visit.

DEPOSED "PRESIDENT"

According to Germany's constitution, Dr. Erwin Bumpke, President of the German Supreme Court, should have succeeded the late President Paul von Hindenburg. His term of President would last only until a successor could be elected, but Hitler elected himself before Bumpke had a chance at the post.

Reformed Calendar

Windsor Man Proposes System With Five Weeks In Each Month

Windsor, Ont.—A 12-month year with five weeks in each month and six days in each week is the simplified calendar which Alexander J. Gilmore, of Detroit, has before the world to-day. He would eliminate Saturday.

His plan would make a working year of 360 days, during which time the calendar would be unchanged from month to month, Sundays would always come on the seventh, 13th, 19th and 25th each month. There would be no Friday, 13th.

To take up the remaining five days, Mr. Gilmore would have them follow Christmas, being a series of festival days. They would end with New Year's day.

To Reduce Relief Burden

Dominion Men To Put 1,200 Men To Work On Jasper Highway

Calgary.—The Calgary Herald published the following:

"For the purpose of reducing the relief burden of Calgary and Edmonton, the Dominion government plans to take 1,200 married unemployed men who are receiving relief and put them to work on the Lake Louise-Jasper highway at a wage rate of 40 to 45 cents an hour.

"Six hundred men will be recruited from Calgary and 600 from Edmonton," it was said.

Grant Wage Increase

Montreal.—An agreement giving wage increases of 10 per cent to those paid by the week and 20 per cent to piece workers virtually brought to an end a strike that tied up the women's clothing industry in Montreal for more than a week. Some 2,000 workers, members of the International Ladies' Garment Workers' Union, will return to their benches.

Old Shell Kills Boys

Kowli, Poland.—Five little boys were torn to pieces by the explosion of a world war shell they attempted to take apart. Two other lads were badly injured. The boys were tending sheep at the time.

Pension For Dollfuss' Widow

Will Receive Sum Equal To Chancellor's Salary

Vienna.—The semi-official Wiener Zeitung published a decree by which Austria ordered the widow of Dollfuss a pension for herself and her children.

The widow will receive during the term of her widowhood a yearly amount equal to the late chancellor's salary. In addition she will receive a special sum for each of her children. In the event of her re-marrying the children will continue to receive special pensions until they come of age.

May Stop Wheat Exports

U.S. Needs Pacific Northwest Supply For Domestic Use

Washington.—The farm administration plans to stop exporting wheat from the Pacific northwest because of the rapidly diminishing supply in the United States.

To date 28,000,000 bushels have been sold through the North Pacific Emergency Export Association. Their operations soon will be stopped and remaining and prospective stocks shunted into domestic channels.

NEW MEASURES TAKEN AGAINST AUSTRIAN NAZIS

Vienna.—Chancellor Kurt Schuschnigg announced the government's agreement to Vice-Chancellor Franz von Papen of Germany as special envoy to Vienna, at the same time taking powerful new measures to end Nazi propaganda in Austria.

A government communique announcing von Papen's acceptance revealed at the same time the granting of sweeping powers to Major Emil Fey, minister of the interior. In the capacity of special commissioner for security measures, Fey is charged with snuffing out Nazi influence.

The long-delayed acceptance of von Papen by the new Austrian government as Chancellor Hitler's special appointee came during a cabinet meeting.

The new envoy faces a difficult task in improving relations which have been strained since Hitler came to power and embittered after July 27 by what the Austrian government openly considered to be proof of a putch partially planned in Germany.

Although it was understood no conditions were attached to the acceptance, it was generally believed here the length of his residence as special envoy will depend more upon the future actions of the German government than upon anything von Papen can do in Austria.

Under the new decree, Major Fey can order dismissal of private employees held to be guilty of spreading Nazi propaganda against the government. "Patriotic" persons will be given jobs thus wanted. The new government thus has gone a step further than the Dollfuss regime ever ventured in efforts to wipe out Nazism.

The relentless campaign of the Austrian government against the Nazis claimed another life on the gallows—this time the life of a soldier in the regular army.

Ernst Feike, a soldier, was hanged in the courtyard here for participating in the putch in which Chancellor Dollfuss was slain.

He was the first member of the government armed forces to be tried and executed on charges of high treason in connection with the Nazi outbreak.

Another death sentence was imposed to-day in Klagenfurt, but the prisoner, Karl Kosterling, also a Nazi, received a commutation to 15 years imprisonment from President Miklas.

Feike in his court martial trial brought in the name of Emil Fey, former vice-chancellor and still a cabinet member, who was imprisoned in the federal chancellery when Dollfuss was killed.

Feike testified that the Nazis who seized the government building desired to establish a "ministry of national concentration" with Anton Rittstein, then minister to Rome, at the head and with Fey as a member.

The defence in the trial sought a hearing by the new chancellor, Kurt Schuschnigg, as to whether safe conduct to Germany had been promised to the putschists. This the court rejected.

As the death sentence was imposed, the soldier raised his arm in a Nazi salute and shouted "Heil Hitler!"

He was pulled back to his bench by a guard.

TWO AVIATORS MAKE CANADA TO ENGLAND FLIGHT

London.—The first successful Canada-to-England flight was written in to Trans-Atlantic crossing records, but two gallant aviators failed in their attempt to set a long distance record.

When James R. Ayling and Leonard Reid set down their "Trail of the Caribou" at Heston aerodrome they had covered approximately 3,700 miles from Wasaga Beach, Ont., their take-off point. Their goal was Bagdad, Iraq, 6,500 miles from the Georgian Bay shores.

Many flights over the Atlantic from Newfoundland have been successful, but the few attempts from Canada—none within comparatively recent years—have failed.

Ayling and Reid left Wasaga Beach at 6:12 a.m. E.D.T. They landed at Heston at 7:07 E.D.T., an elapsed time of 30 hours and 55 minutes.

A rapidly diminishing supply of gas forced them to change their plans and land in England, the flyers said. "It was a wonderful trip," said Reid, "but we surely are disappointed we couldn't continue on to Bagdad."

"We had had weather most of the way across the Atlantic. The controls jammed several times. So when the gasoline supply seemed to be dropping we thought it best to land."

"Anyway, we're glad we landed safely," Reid added.

The flyers said they had been running into increasingly unfavorable weather. They landed in a private flying field at Heston in Middlesex, shortly after flying over London.

When the black-winged biplane came to the ground in a perfect landing, the few members in the Heston clubhouse rushed out in surprise. They were amazed when they learned who the flyers were.

"We are glad to be here," they told spectators, who showered congratulations upon the two men. "What shall we do about customs regulations?"

Their calmness proved a source of surprise. "It's all done so nonchalantly as if they had come from just around the corner," said one official at the aerodrome.

Customs requirements met, the flyers took off for Hatfield, home port of the ship when it was "Seafarer II," piloted by Jimmy Molinson and his wife, Amy Johnson.

Leaves To Claim Fortune

Former Alberta Man Will Use It To Establish Innocence

Toronto.—John F. Gallagher, convicted in 1923 of the murder of John G. Coward in Alberta, sentenced to be hanged and later acquitted, has left for England to claim \$500,000 which an aunt promised him if he gettles down and marries before Dec. 25, 1938.

Gallagher, who has been living in Toronto during the last three months under an assumed name, was convicted of arson when his home in Alberta was destroyed by fire. Sentenced to life imprisonment, he appealed and sentence was judged excessive. It was reduced to 10 years and he served the term in full.

Gallagher plans to use a portion of the fortune he will receive in England in an effort to establish his innocence of the arson charge and bring to justice the murderers of Coward and I. Fuller, friends and neighbors in Carbon, Alberta, both of whom were killed with a year.

Resignation Announced

General Manager Of Canadian Airways Going To U.S.

Winnipeg.—Resignation of Wilfred C. Sigerson, general manager and comptroller of Canadian Airways, Limited, was announced here by James A. Richardson, president.

It is understood Mr. Sigerson will leave here shortly to take an executive position with an aviation company in the United States. Mr. Sigerson then minister to Rome, at the head and with Fey as a member.

Liner Heads Own Ties

Cherbourg, France.—The Canadian Pacific liner Empress of Britain, claimed a new record for the Quebec-Cherbourg Atlantic crossing. Her time for the crossing was four days, six hours and 58 minutes, 34 minutes under her own previous record, set in August, 1933.

World Demand For Speed Has Been Met By Fast Air Liners Built In British Factories

World demand for speed has drawn from British aircraft factories, within the past 12 months new types of civil aircraft which, at from 170 to 260 miles an hour, are faster and more efficient than the best comparable machines designed and built abroad.

In recent weeks the world's fastest four-engined airliner, the "Diana," built primarily for work over the extension of the Empire airway from Singapore to Brisbane and New South Wales, has exceeded all expectations in a series of rigorous trial flights. A similar twin-engine machine, the D.H. 89, has proved itself nearly as fast, and just as efficient.

Three more new machines designed to satisfy the demand for speed are in an advanced stage of construction and will be flying within the next few months. Each is expected to attain a maximum level speed of at least 170 miles an hour; the fastest of the three is designed to fly at nearly 200 miles. This speed will be obtained even in the most powerful of these machines with expenditure of a comparative minimum of power.

Each of the new machines derives power from two engines. Two of them are monoplane equipped with the fashionable retractable undercarriage, and the third is a biplane modelled on the mail carrier which was built to air military order last year.

Their designed loads in passengers ranges from six, which is the smallest and least powerful of the three, to 10 in the Blackburn craft. Each machine will carry a crew of two.

Inverts Weather Machine

Denver Man Claims It Will Give Perfect Climate

An Utopian climate is Detroit's for the asking—with warm weather in winter and cool soothing breezes in summer—if the city fathers but have courage to lead the way.

The common council received a letter from Joseph A. Shires, Denver, Colo., who said he had perfected a "weather machine" and wished Detroit to be the first to use it. He asked that the letter be forwarded to the "Honorable Mayor." It related a simple inexpensive method of assuring perfect weather at all times, eliminating extreme cold and heat, dust, smoke and unsavory odors of a large metropolis.

These "weather machines" are built by Shires and his associates, he wrote, and may be placed in alleys, houses, vacant lots, or even strung across streets. They were described as being of a long cylindrical shape.

The manner of operation was explained by Shires. He wrote:

"We have our cooling and filtering processes in summer. We pour in the clean cold air which will mix with the hot air rapidly. In winter we propose to take out of the machine the cooling element and replace them with heating units."

Apparently assuming his invention would meet with some scepticism, Shires said several foreign powers had already sought to investigate it.

Not Finding Much

But Boys Enjoying Treasure Hunt On Lake Floor

Treasure hunting on the bottom of Nelson lake has not proved remunerative for George Munroe and "Rastus" Woods, two youths of Nelson, B.C., but they are getting a thrill from their "under-sea" exploration journeys.

The youths use a home-made diving gear—a pail with a glass window and an air line made out of a 50-foot section of garden hose. The air is pumped to the diver by means of two small bicycle pumps. A flashlight in an air-tight sealer supplies the light.

The Nelson divers have descended between 25 and 30 feet, staying down five and 10 minutes each time. One hammer, a number of cans and a quantity of gravel constitute the "treasure" found.

Canada's Leather In Demand

Canada is now producing some of the finest leather in the world and is competing successfully abroad, according to the industrial department of the Canadian National Railways. In patent leather, the Canadian product is especially desired.

Business with the profits on one side is a wild form of robbery.

W. N. U. 2059

Was Lonelier Than Crusoe

Man Retires After 52 Years Service In Australia

A man on the world's loneliest job has just retired. He is W. Holtes, who is going into civilization after 52 years' service on the overhead telegraph line which runs north and south, right through the middle of Australia. His solitude has at times been deeper than that of Robinson Crusoe or a lighthouse keeper. Every inch of the twin wires linking Adelaide with Darwin, 2,000 miles away, must be supervised constantly to guard against breakages. The line-men are posted in twos or threes at the stations on the line, but when there is trouble to the north and the south at once they are often alone for days. The most desolate posts have their own vegetable gardens and enclosures for cattle, sheep and goats. Travelling over the arid sandy wastes or through thick scrub would be impossible were it not for the camel, and the line-men always employ them when searching for breakages. The normal term in such a post is only three years, but there are men who prefer it to city life, and return for choice to their hermitage where they may enjoy their hobbies in peace.

Winnipeg Newspaper Union

By Ruth Rogers

NICE AND PLAIN AND SMART—

ISN'T IT? IT HAS SLENDER CAPED AND WRAP-UP TREATMENT

The cape is versatile. It's almost magic. It seems to turn into sleeves at the front, while you look at it. The wrap-over arrangement is always a favorite with the larger woman. It slims the figure so perfectly. The skirt pleats allow plenty of freedom for walking.

Maize eyelet batiste, so refreshingly cool to look at and to wear, made the original model, as sketched. You can copy it exactly at very little expense. It's simple as falling off a log to make it.

Chiffon cotton voile prints, linen prints, batiste silks, pique voile print, etc., are other lovely materials for your choice.

Style No. 381 is designed for sizes 36, 38, 40, 42, 44, 46 and 48 inches bust. Size 36 requires 3½ yards of 39-inch material.

Price of pattern 20 cents in stamps or coin (coin preferred). Wrap copy carefully.

It is unreliably reported that in order to assist Uncle Sam on the road to recovery, we are sending our own Recovery Cabinet as a partial payment of the war debt.—Strut in the Daily Express

Good Food For Sheep

More Home-Grown Grains Should Be Included In Rations

As a class of livestock, sheep are not heavy grain eaters. In Canada sheep are probably fed less grain than in most other countries. This is due to the fact that the majority of farm flocks in Canada are small.

During the summer months sheep flocks on the average farm have access to a variety of pastures, hay meadows, and grain stubble fields. During the winter months in some districts they usually have considerable outdoor grazing in addition to hay and stored feed.

Range flocks are handled under, entirely different conditions to farm flocks, but here again the ewe bands are carried through the summer on range pasture and during the winter little or no grain is fed except under most severe weather conditions, and then only for very limited periods.

It must be admitted, says A. A. MacMillan, associate chief of the Dominion Livestock Branch, that, if the Canadian sheep industry is to come more completely to the Canadian market for lamb and mutton meat, a steadily increasing volume of home-grown grains, particularly oats and barley, may probably be fed to sheep and lambs.

Certain by-products of the Canadian milling industry may also be utilized to advantage particularly in rations for fattening lambs. The use of these by-products is mentioned especially as a protein supplement in the ration for pregnant ewes and ewes after lambing.

First Christian Church

Interesting Discovery Is Made In Home By Archaeologists

Ruins of what is believed to have been the first Christian church, as well as the first residence of the popes, were unearthed recently by papal archaeologists.

The find was made during excavations, under St. John Lateran, the Cathedral of the Pope, which itself, according to tradition, was started in the year 324 by Emperor Constantine the First.

Originally St. John Lateran was called the Basilica of the Saviour. It is known and revered throughout the Catholic world as "the Mother Church and the head of all churches of the city and of the world." It stands on the Vatican hill and according to tradition, it is the site of St. Peter's tomb.

Australia, with a population only slightly exceeding two persons per square mile of area, has more automobiles per capita than any other country except the United States and Canada.

Building Aeroplane Cruiser

Sweden's first aeroplane carrier, the armored cruiser Gottland, will soon be completed and ready to join the fleet. Measuring 443 feet over all, the carrier will be the largest unit in the Swedish navy. It will carry on its deck eight naval aeroplanes, which will be discharged by means of a catapult, and hoisted on board again with the aid of a davit crane.

Received Value

An American negro was boasting to a grocer of the cheapness of ten pounds of sugar he had bought at a rival shop. "Let me weigh the package," said the grocer. The darkey assented, and it was two pounds short. The "colored gentleman" looked perplexed for a moment, and then said innocently, "Yes, but while he was getting it, I stole two pairs of shoes."

Viscount Allenby, conqueror of Palestine, and Admiral Reginald Tyrwhitt, hero of the Dogger Bank and Heligoland Bight, are shown as they reached Canada on board the Empress of Britain. Reading from left to right, are: Sir Reginald Tyrwhitt, Lady Tyrwhitt, Lady Allenby, and Viscount Allenby.

Rapid Growth Of Crops Secured By Use Of Chemicals And Other Artificial Aids

Salt In Hay Now

Retards Generation Of Heat And Also Prevents Mustiness

Spontaneous combustion may take place in hay that is apparently well cured and uniformly dry when stacked or stored in the barn. A state of uneven moisture throughout the stack, developed after storing, is sometimes sufficient to cause spontaneous combustion. The heavier hays, such as alfalfa and clover, are more liable to spontaneous heating and combustion, since their stems contain a greater percentage of moisture and they are difficult to cure properly.

Salt on hay in stacks or mows retards the generation of heat, keeps down the growth of molds which cause mustiness, streaks and loss of food value, and makes hay more palatable and healthful to animals. Salted hay has a better color and aroma and a higher percentage of attached leaves, due to being cut green and stored early.

All farm animals need salt and thrive on a properly salted diet. It has been proved that cows must have salt to give milk and raise calves. Salted hay has been observed to produce more milk from cows. Feeding experiments show that as much as 20 pounds of salt added to a ton of hay has no harmful effects on animals; 30 pounds per ton has a slight purgative action.

When salting hay, use an adequate amount—10 to 20 pounds to the ton of hay—and distribute evenly throughout the load. Place hay in the stack or mow in layers of 12 to 15 inches thick and apply salt liberally after each leveling with the hayfork or slings.

The River Postman

Ingenuous Way Of Despatching Mail During Siege Of Paris

During the siege of Paris by the Germans in 1870 the post office administration hit upon the expedient in addition to the balloons, of enclosing letters in small zinc globes, water tight and hermetically sealed, and dropping them into the Seine. There they floated, if they were not captured by the Germans, down the river to the French lines, where a net stretched across the river gathered them in, and they were sent on their way. Unfortunately, for the French, the Germans discovered the character of these zinc floats, and as they could not hope to see and fish out by ordinary means all the letters that went down this way, they stretched across the river, at Villeneuve Saint Georges, a net of their own and effectually stopped this system of postal communication. The zinc balls and their use were pretty nearly forgotten, when about 20 years ago, a fisherman found in the Seine, near Villeneuve, a queer looking globe of zinc. With a large knife he opened it, and found three hundred letters, still legible, and all dated December, 1870. They were delivered to the postal authorities, who were forwarded to their destination after having been in the river for more than 30 years.

Three-Ton Machine Does Work In Record Time

A machine which, when completed, will weigh more than three tons and will think faster than the human brain, is being built at the University of Pennsylvania, Philadelphia. It is called a differential analyzer and is the second of its kind in the world. It will be bigger than its predecessor, having a length of 26 feet and a width of 10 feet.

In 15 minutes it can do work which would take a dozen expert mathematicians a week to complete. While the machine can be used in all branches of engineering, it will especially aid in calculating firing ranges by the army and navy.

ESTABLISHED 1907
THURSDAY, Aug 17, 1934.

Local News

O. E. Jones commenced combining barley on Wednesday.

A. Hoffman was a visitor in Calgary on Friday.

Mr. and Mrs. D. J. Hall were Calgary visitors on Sunday.

Miss McLaughlin of Calgary will teach at Oneil school this term.

The Oneil school has been re-shingled and painted.

BORN—To Mr. and Mrs. Wm. Aldred on August 13, a daughter.

Thresher's lien notes can be had at the Chronicle office.

Mrs. Wm. Wolegde returned on Tuesday from Seattle, Wash. where she has been visiting her son.

Mr. and Mrs. W. D. McCool and Ruth were Calgary visitors on Sunday.

Nurse "Bunny" Hyde of Edmonton is spending the holidays with her parents here.

Clarence Gibson of Regina, visited his uncle and aunt, Mr. and Mrs. R. G. Gibson on Monday.

Mrs. T. G. Sefcon and Irene left on Wednesday on a holiday trip to the coast.

Mr. and Mrs. J. G. Harrison and children were week-end visitors at Sylvan Lake.

The Crossfield school will open for the fall term on Tuesday, Sept. 4th.

Gilbert Morrison, father of Mrs. A. W. Gordon, suffered a slight stroke on Sunday afternoon.

Mr. and Mrs. J. Markle of Midlandville visited with G. Y. McLean last Wednesday enroute to Calgary.

Mrs. Hugh Allen of Grand Prairie is the guest of Mrs. R. M. McCool this week.

Donnie McFadyen and his mother, Mrs. A. J. McFadyen were week-end visitors to Lake Louise.

Miss Grace Williams returned last week from Laura, Sask. where she has been visiting her sister.

Mrs. P. C. Griffiths and daughters Mary and Dorothy are visiting in the Ponoka district this week.

Audrey McLean celebrated her sixth birthday last Saturday by being hostess to her young friends.

Mrs. R. G. Gibson and grandson Gordon Ross are leaving on Friday to visit relatives at the coast.

Mrs. A. Cruickshank and Mrs. Annon of Waukegan returned on Sunday after spending the week at Banff.

We notice that the town is overrun once again with stray dogs. How about a little shooting practice?

Jim Ruddy was up from Calgary on Saturday, renewing acquaintances and looking after his farm interests in this district.

The home of Wm. Wood which was built last year has been beautified by the addition of a porch and the entire building succored.

The C. P. R. section house, home of John Zanni, has been succored and the interior painted and repaired.

Weed Inspector E. M. Crisfield is the most damned man in the district, but he is handling a difficult job and getting results.

Having completed a very pleasant holiday at Sylvan Lake, Rev. E. Longmire with Mrs. Longmire and children returned home on Friday.

A. W. Gordon left today (Thursday) to adjust wall losses at Champion and other points in southern Alberta.

The many friends of Frank Hopper will be glad to know that he is able to be up and around again following a week of illness.

Miss Ruth Stauffer arrived home on Saturday morning after visiting relatives at Kitchener and Toronto, Ontario.

Mr. and Mrs. Wm. Urquhart and Miss Mary Urquhart were the week-end guests of Mr. and Mrs. C. J. Urquhart at their cottage at Sandy Cove Beach, Pine Lake.

Open season on Hungarian partridge will be from noon October 1st till December 15th at sun set. These birds are plentiful in this district.

Local News

Mrs. Kilpatrick and son Eldon Bowers of Herrington, Kansas, are visiting the former's father D. K. Fike, and her brothers Miles, Joe, and Irvine.

Mr. and Mrs. J. R. Gilchrist and daughters Jean, Gladys and Lois of New Dayton, Alberta, are visiting friends and renewing acquaintances in town this week.

Mr. and Mrs. R. D. Sutherland attended the Memorial Service conducted by the Didsbury Branch of the Canadian Legion at the cairn on the butte near Didsbury on Sunday afternoon.

Rev. E. V. Phillips and Mrs. Phillips are conducting a campaign near Wainwright. Rev. F. Bennett of Leslieville will take the services in the Baptist Church on Sunday next.

David Chow who has been employed for some months at the Oliver Cafe has been let out. Chow made a great hit with one of our young matrons, who no doubt will regret his departure.

D. K. Fike returned on Friday after spending the past two months visiting his sisters at Dysart and Waterloo, Iowa. He also visited other relatives at Vinton, Garrison, and Van Horn, Iowa. Dan states he took a cold while down there and they thought he was going to peg out, however, he had different ideas and soon recovered.

Miss Florence Cruickshank is visiting relatives at Wayne.

Mr. and Mrs. A. C. Tomkins and Oliver of Myrnam were the guests of Mr. and Mrs. P. L. Johnston on Wednesday.

Mrs. Landymore, sr. has gone to the coast to visit friends and relatives.

Jack and George Fleming are holidaying at Gull Lake.

Miss Margaret Cameron is visiting her aunt at Banff.

Mr. and Mrs. Mann of Lacombe were week-end guests of Mr. and Mrs. Percy Fleming.

Percy Fleming, C. P. R. agent commenced his holidays on Wednesday and for the next two weeks will do a lot of hard work improving the grounds around his new home. T. Bales of Calgary is acting agent during his absence.

GARDEN PARTY
The Women's Guild of the Anglican Church take this means of thanking all those who in any way helped to make their recent Garden Party a success.

For those who were unable to get out on Wednesday, Mrs. Arnott will be at home on Sunday afternoon from 3 until 6 o'clock.

Saturday Night Dance
A dance will be held in the U. F. A. Hall on Saturday night, Aug. 18. Dancing from 8:30 to 11:55. Borbridge Orchestra. 35c a couple, single admission 25c.

Thresher's Licenses
Thresher's Licenses may be had at the office of the M. D. of Rosebud No. 280, Crossfield.

Raise Funds for Calf Club
The Calf Club dance at the Madden Hall last Friday night was only fairly well patronized. No doubt this was due to the thunderstorm over the district that evening; however, due to the co-operation of all concerned, enough was left over after paying expenses to pay the Calf Club's share of the prize money.

WARNING
M. D. of Rosebud No. 280

Complaints have been received of damage to crops and pastures through stock being turned out on road allowances contrary to the terms of the "Domestic Animals Act."

Warning is hereby given that such animals are liable to be impounded and that if further complaints are received the council will take action to have all such animals placed in pound.

A. S. Gough, Reeve
R. D. Sutherland, Sec'y-Treas.

Gleanings Here and There

Financial

The big Wizards of Bawl Street, are glad to see Donnie McFadyen back in their midst. Last year they took some of his foreign money on the world series, but this year they will not be content unless they have the whole melon.

Archie McFadyen expects to be on easy street after harvest, so any of you boys who figure you can pick the winner of the world series, can arrange with Archie, he will take on all takers, in fact he intends to emulate "Lloydie."

Douglas Fleming got the shock of his young life recently when he finished a day's work for Hughie McIntyre, he was rewarded with a fifty-five cent tip. The depression must be over.

James Dickson, the local bank teller is at present on holiday, and is visiting friends in the East. G. Y. McLean is the relief man on the tellers mound.

Social

Almost daily one can see old familiar faces returning to the district, from points afar, the annual vacation is over, the bank roll busted or bent, but never mind give them a little time to rest up, and they will be all ready for the busy winter social whirl.

Board of Trade

Things have been quiet around the Campus lately, but when interviewed the Secretary just smiled, and said "Toll your readers, we are working away, planning big things for the near future. Crossfield Board of Trade still lives, watch for our next big venture."

Palais De Danse

The local trippers had a good time at the Saturday night dance and the following was overheard during the dancing:

"He was telling her while dancing, that he felt like an angel, due to his being in good spirits!" Just then she stumbled, and with true SHAVIAN wit remarked, "That the thought of dancing with an angel had overawed."

He: "May I have the next dance Miss—?"

She: "Sure," "I'll string along with you."

Medical

Dr. Whillans: "Yes, a few lettuce leaves without oil, and a glass of orange juice. There, madam, that completes your daily diet."

Mrs. ———, (99 lbs. overweight) "Thank you so much doctor, but do I take this before or after meals?"

"Scotty" MacAulay, well known humorist of Calgary is renewing acquaintances in town and visiting his sister Mrs. Wm. McCrimmon.

Local citizens observed a small flock of geese passing over the town on Sunday night en route to the south. This may be a sign of an early winter, although it is anything but winter here at present.

THE THRIFTIEST BUY OF ALL

GOOD YEAR SPEEDWAY TIRES

Why buy bargain tires of some unknown brand when you can get new Goodyear Tires at these low prices?

Don't risk an accident due to the blowing out of a weak tire. Make your vacation or your business trips SAFE and free from worry. Replace old, worn tires NOW with new Goodyears.

Every "Speedway" bears the Goodyear name and carries the guarantee. And remember, we do a good job in tire mounting for you—FREE, of course.
